

A. Temporal contrast per fit [EL06]

B. Per-window L vs R (median 0.974) [EL06]

C. Rotation reversal at vel_scale=2, absent at vel_scale=0 [EL05, EL14]

D. Summary of Section 2.5

- Velocity supervision $\rightarrow$ operator whose leading direction agrees with R per-window ($|\cos|$ median 0.97) [EL06]
- Cross-seed variance halved (SD 0.011 vs 0.021) [EL06]
- But: v_{ref} is nearly linear in X_{pca}
 $\text{RidgeCV}(X_{pca}) \rightarrow v_{ref}: R^2 = 0.92$
 $\text{scJDO } J_L \text{ features} \rightarrow v_{ref}: R^2 = 0.43$ [EL13]
- Rotation reversal at vel_scale=2
vs vel_scale=0 (magnitudes $\sim 10\times$ smaller) [EL05, EL14]
Direction is prior-selected, not snapshot-determined.
